

Instantly locate, communicate, and get help to your mobile workforce 24/7

AlertGPS is a leading innovator in connected enterprise safety technology. Our ActiveHalo® safety wearable device and mobile safety app, available for iOS and Android smartphones and tablets, combined with the AlertGPS Cloud-Based Alerting Platform, proactively monitor and enable rapid communications and emergency response to workers who are injured or threatened.

At the simple touch of a button, a worker can quickly trigger a two-way emergency call to our 24/7 response center, with trained agents ready to dispatch help anywhere in the U.S. or Canada.

Advanced safety features:

One-touch SOS button with 2-way voice

Registered sex offender/predator alerts

24/7 response and monitoring center with emergency dispatch

Timed sessions with missed check-out alerts

Location positioning with GPS, Wi-Fi, and BLE

Check in button to report time and location

Advanced privacy options

Fall detection with automatic SOS call

24/7 companion: safety concierge services

AT&T Nationwide network

Customizable smart zones and threats zones

Secure IoT platform

OSHA compliance reporting

Home healthcare and hospice

Workforce challenges

Exposure to workplace violence risks such as abuse, harassment, and assault.

Burnout and turnover due to high-pressure environments and long working hours (workplace violence is a major reason for burnout, stress and turnover among nurses).

Working alone and providing services in unfamiliar environments, including increased exposure to violence, verbal and sexual harassment from hostile patients, other individuals in the home or neighborhood, as well as aggressive pets and other animals.

Robbery risk associated with common belief healthcare clinicians carry pharmaceuticals.

Workplace injury and overexertion due to slip and fall hazards.

Risk of vehicle accidents associated with driving to and from appointments.

Providing primary and urgent care in unsecured environments, including erratic and aggressive patients dealing with addiction and mental health issues.

Feelings of uneasiness driving to and walking between patient appointments in unfamiliar or remote areas.

Industry staffing shortages resulting in increased clinician workload and impacts on quality of patient care.

Common use cases

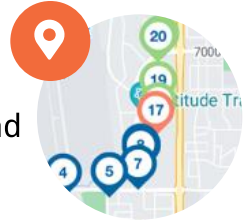

- Home healthcare nurses (RNs, LPNs And CNAs)
- Home care aides
- Home hospice providers
- Personal care assistants
- Respiratory, speech, occupational, and physical therapists
- Behavioral health clinicians
- Mobile urgent care professionals
- Home healthcare case managers
- Palliative care nurses
- Infusion services providers
- Providers at outpatient clinic facilities
- Medical equipment delivery professionals

How AlertGPS works

01 - Alert

Press the SOS button on the device or app to almost immediately initiate a two-way voice call to our 24/7 response center.

02 - Locate

The user's location is instantly pinpointed and transmitted.

03 - Communicate

Our highly trained Monitoring Center agent answers the call and assesses the situation. Alerts are simultaneously sent to designated members of your team.

04 - Respond

Our agent dispatches emergency services and stays on the line providing reassurance until help arrives.

“

Our Company has a national **network of 4,000 clinicians**, providing in-home health assessments. The logistics of having so many people distributed throughout the country, means that safety is always a paramount concern. Our heroic clinicians go into all sorts of neighborhoods. The vast majority of our patients are grateful to see us, without any safety issues. But a few of those visits do have heightened safety considerations. **That's why I was glad to find a partner like AlertGPS to help us get their safety App into the hands of our clinicians.** Having that peace of mind has been welcomed by our staff.

CISO, Home Healthcare

”

The ability to quickly summon the authorities without arousing suspicion makes all the difference during an incident. We recently had clinicians in a rural location and a man became increasingly verbally and physically abusive towards them. At the touch of a single button on the AlertGPS device, our workers were able to quickly and discreetly get help.
